Tetrix

Tetrix is a block-based puzzle game invented in the 80s and has been one of the most popular classic video games among all generations. It has a very simple goal of destroying blocks by completing a line without reaching the top. The game provides a lot fun by stacking and organizing the colorful blocks as if building a brick wall.

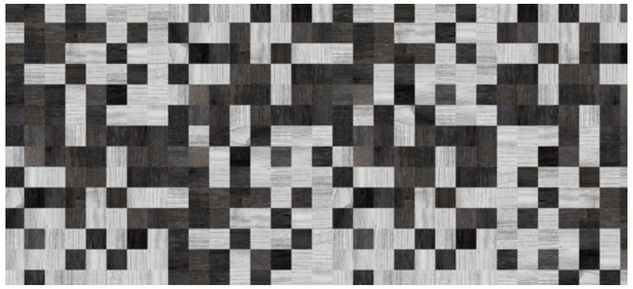
Variation

In Tetrix, seven simple units can be moved, flipped and rotated to create a variation of shapes. The same basic elements create different variations of shape and colors that can be mixed and interchanged to create a variety of results in the end. Tetris doesn't have solution, but rather a variety of opportunities.



Modular

The modular concept emerging from Tetris has been applied in architecture practice in many ways, creating a sense of simplicity and expansion through the use of simple modules that have infinite possibilities.
